1

Turn ON Device: Press & Hold *Up Button (2)*.

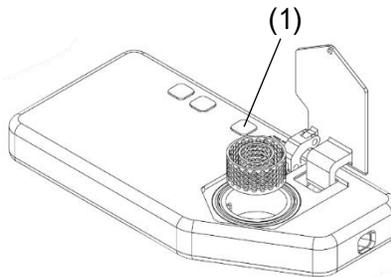

Open Lid: Press & Hold *Lid Button (1)*.

2

Remove Bowl & Pack: Gently tilt device so the RotoBOWL falls into your palm. See page 6 for details.

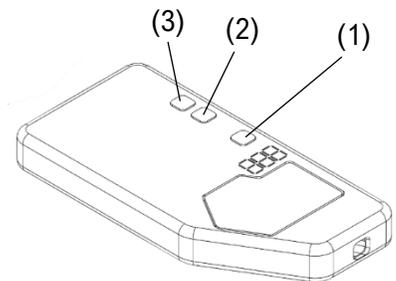

Re-Insert & Close Lid: Press & Hold *Lid Button (1)*. Auto-Shutoff occurs after 90 seconds of inactivity, so ensure the device is ON before pressing the *Lid Button (1)*.

3

Set Temp: Change desired temperature by pressing the *Up Button (2)* or *Down Button (3)*.

Inhale & Inspire: See next page for puffing tips. Gently inhale for 10 seconds or more. If Purifyzer vibrates during the puff, you are inhaling too harshly and need to go slower so the vibration ceases. This is to ensure optimal performance.

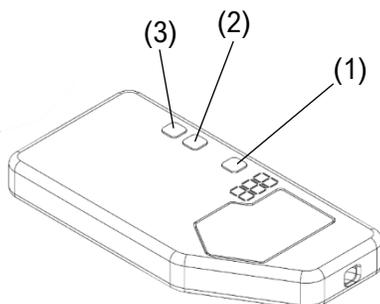

4

Rotate & Rejoice: At your leisure, press & hold the *Lid Button (1)*, rotate the RotoBOWL with your index finger, then close the lid. Enjoy a fresh new flavorful patch of unvaporized herb.

Covert Conclusion: Press the *Up Button (2)* & *Down Button (3)* at the same time to power off Purifyzer.

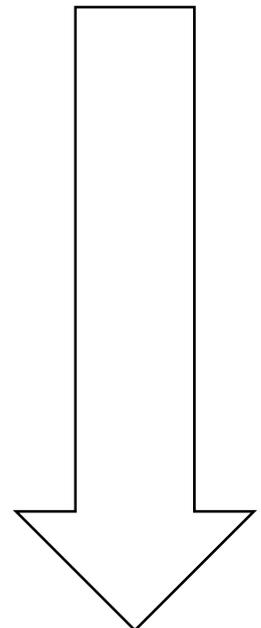

Cooling, cleaning, charging and other details are elaborated below.

Inhalation Tips

Pretend like you're gently and slowly sipping through a small coffee stirrer when starting the puff. As you slowly increase your suction during the puff you will notice the vibration come on. When it does, slow down your draw just a tad bit so that it stops vibrating. It's best not to inhale too harshly, somewhere near or below the vibration threshold is a great place to start. Each puff should be at least 10 or more seconds long.

When to Rotate?

Rotate after you feel the living, fresh flavor is sufficiently extracted from the herb. This could be after a few (~2 or ~3) 10+ second puffs at higher temps, and a tad bit more at lower ones. It depends on the affects you feel, herb and freshness (tip: Always pack fresh herb that isn't too dry so you can enjoy the freshest taste).

How Much to Rotate?

~36 degrees, or 1/10 to an 1/8 of a full turn will be enough to position a new patch of fresh herb in front of the heater to be freshly vaporized and flavored. Rotate in your direction of choice (clockwise or counter-clockwise).

AVB Color? When is My Herb Spent?

Darker isn't always better when it comes to extraction and vaping. Judge by how you taste the herb as opposed to what it looks like. The RotoBOWL is different from ordinary bowls, its more about flavor and controllable dosing. Results will vary with different herb. Here are some pictures to help you understand and give you an example. The vaped portion was vaped at 400°F, taking 2-3 hits (10+ secs each) and then rotating ~1/10 of a turn for a total of 8-11 hits and ~4 rotations.

Fresh bowl that has not been vaped.

Bowl that is partially vaped.

Fully Vaped.

Fresh.

Fully Vaped.

Fresh.

Display Messages

Battery Level: Briefly flashes as a percentage when the Purifyzer is turned on.

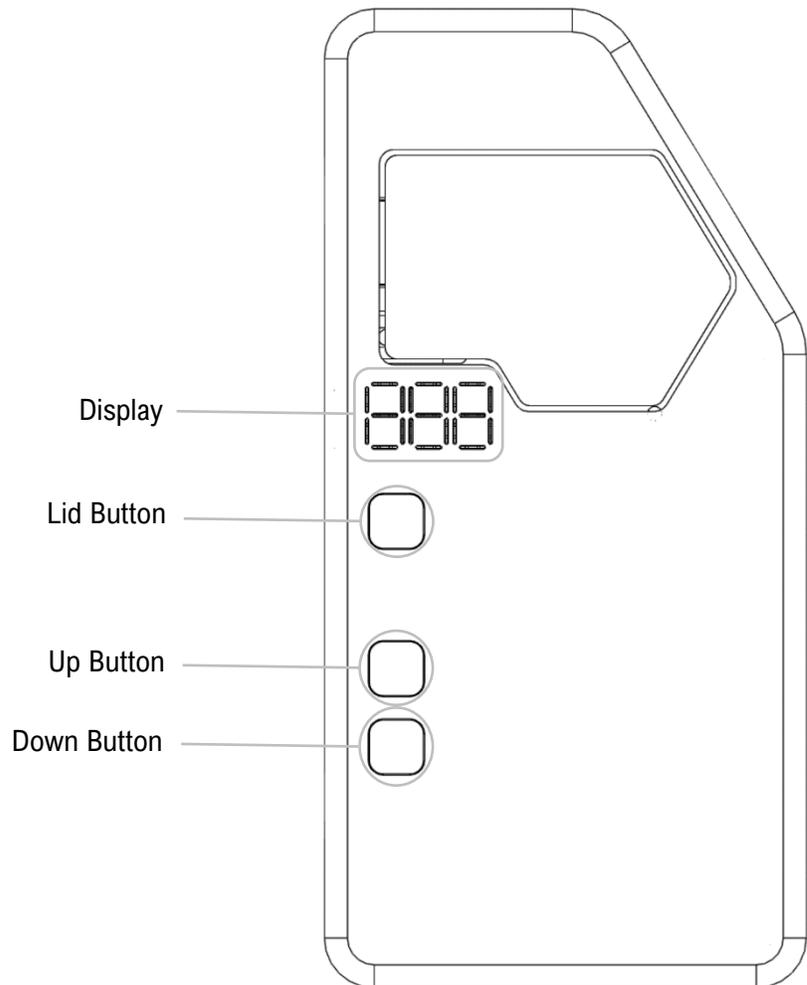

Charging: The display animates when the Purifyzer is plugged in.

Charge Complete: The display shows “100”.

Low Battery Shutoff: The display flashes “Lo”.

Auto Shutoff: The display turns off after a short while of device inactivity, or if the device gets too warm or cold to protect the battery.

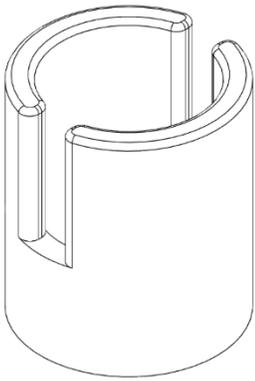

If none of the prior events are occurring, the user-adjustable temperature is shown in Fahrenheit on the display. The display auto-dims and re-illuminates when any button is pressed.

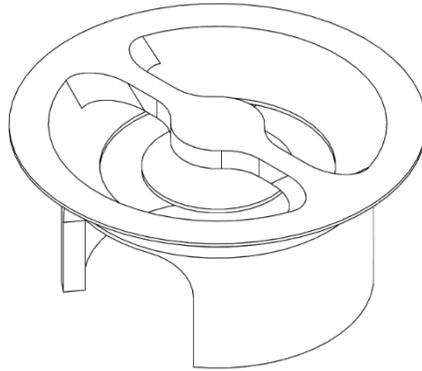

User Functions

- **Turn On:** Press & Hold the *Up Button*.
- **Turn Off:** Quickly press the *Up Button* & *Down Button* at the same time.
- **Increase Temperature:** Press the *Up Button*.
- **Decrease Temperature:** Press the *Down Button*.
- **Open or Close Lid:** Press & hold the *Lid Button*.

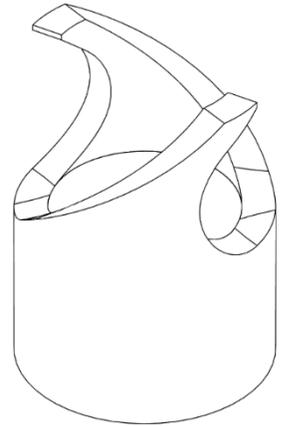

Included Accessories

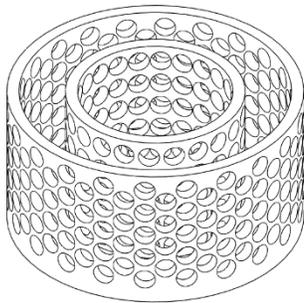

Ram

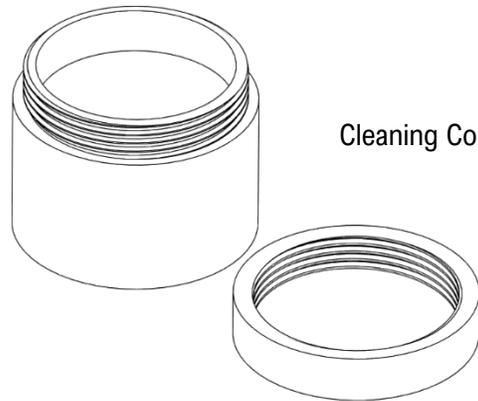

Funnel

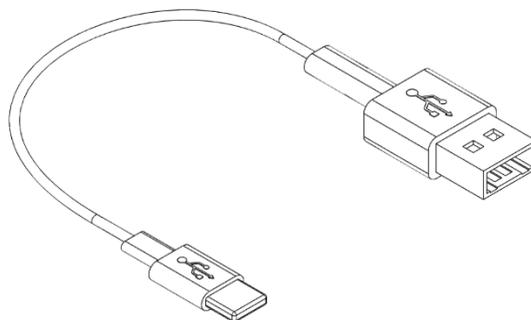

Extractor

Stainless Steel Bowl

Cleaning Container

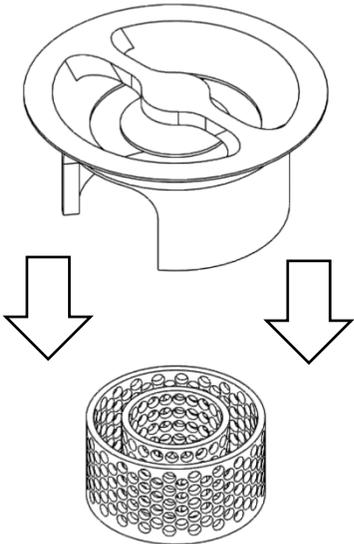

3' (1m) Long USB-A to USB-C Charging Cable

Packing the Bowl

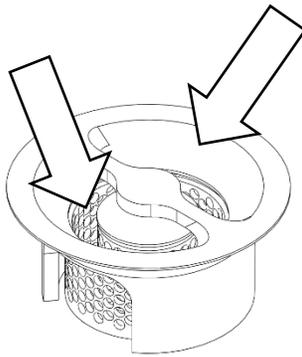

1

Place the bowl on a sturdy surface; then place the Funnel over the bowl.

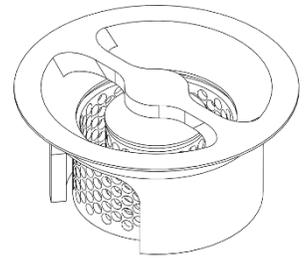

2

Be gentle as you loosely place a small amount of finely-ground, fresh herb (that isn't too dry) into the Funnel & bowl. (Shown in [Demo Video](#))

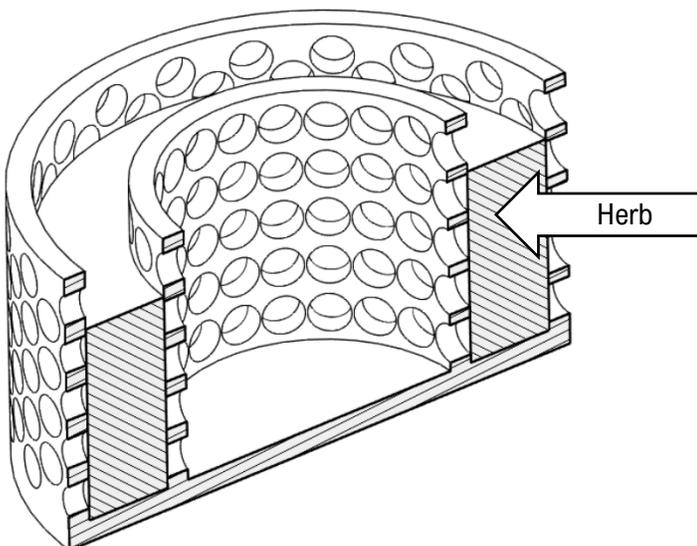

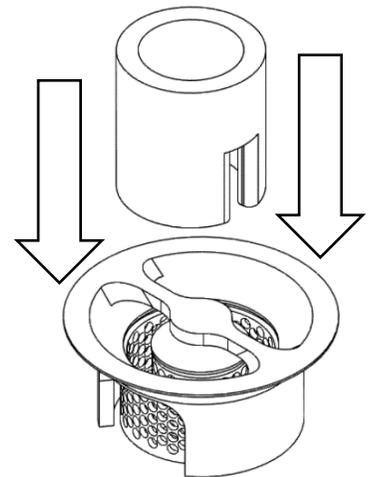

3

While holding down the Funnel with your hand; repeatedly tap the Funnel (or your fingers holding the Funnel) with the finger of your other hand to settle the herb into the bowl. (Shown in [Demo Video](#))

Take the Ram and very gently level the herb lightly into the bowl.

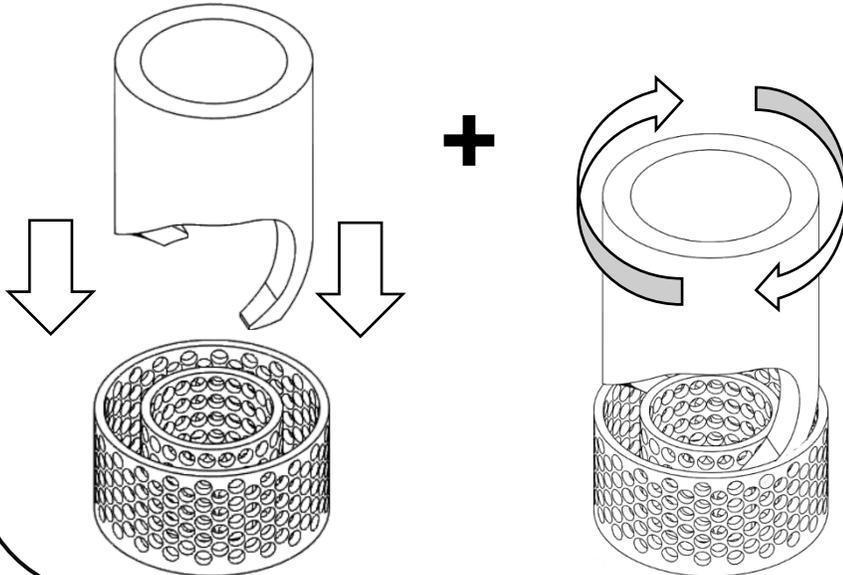

Tip:

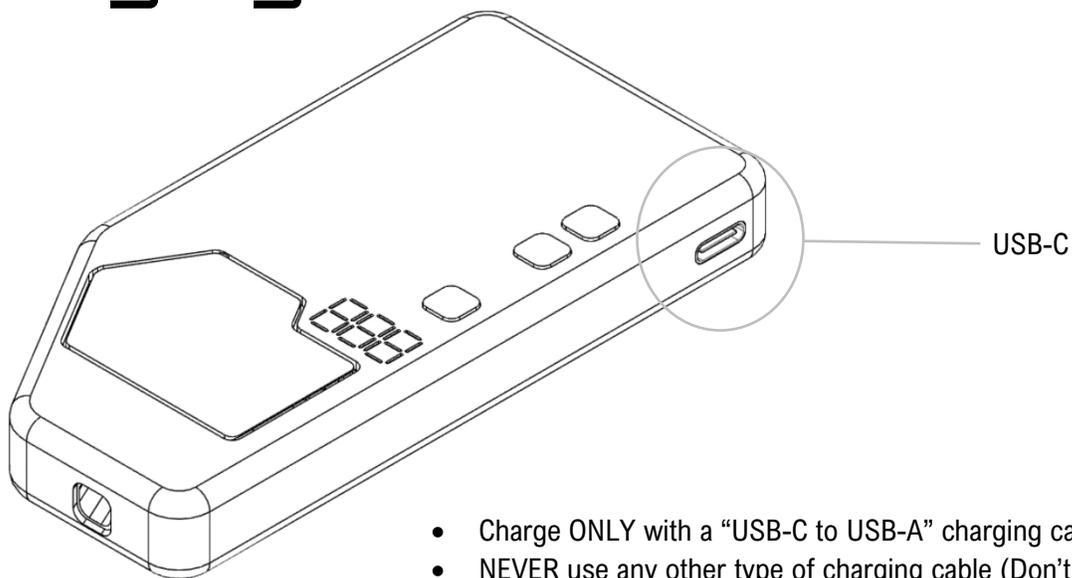

After packing, gently brush off any fine herb particles from the bottom and sides of the bowl with your finger. Ideally you want to very gently pack the herb and leave a thin gap at the top. Notice how the bowl isn't packed to the brim, and that the herb only fills the bowl to about ~80% of its height. This is the proper way the bowl should be packed. Packings that are less dense work best. Clean the bowl (page 9) very frequently.

1

Simultaneously insert & rotate the Extractor clockwise. Repeat as needed. Do not force it. Be gentle and graceful or the RotoBOWL may bend. Gently grasp the bowl during this procedure as you articulate the Extractor.

Charging

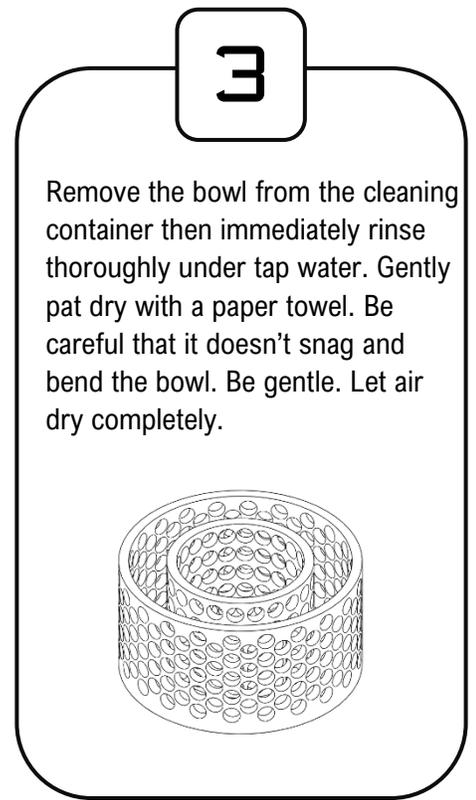

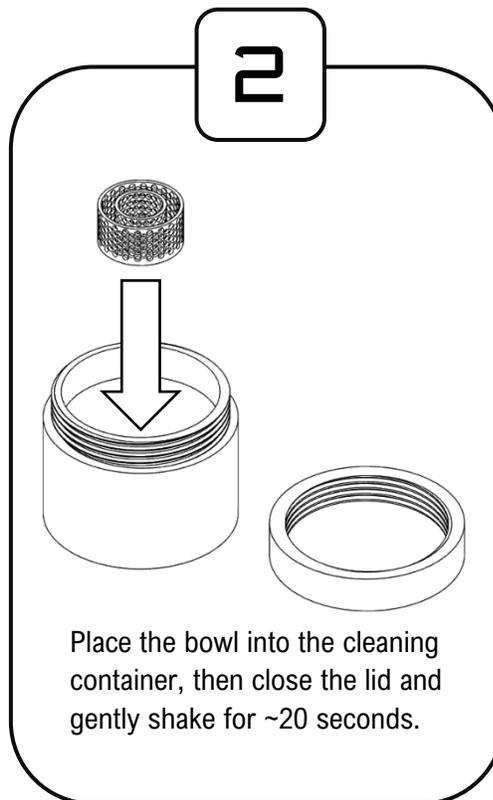

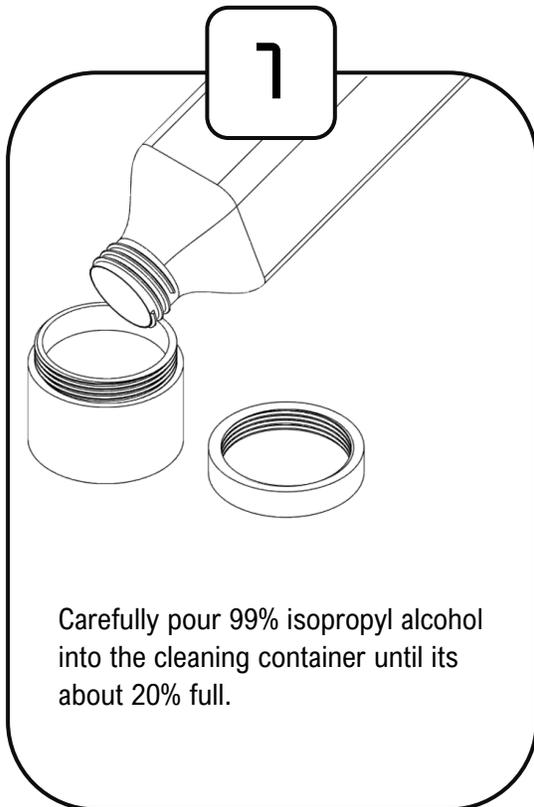

- Charge ONLY with a “USB-C to USB-A” charging cable.
- NEVER use any other type of charging cable (Don't use USB-C to USB-C).
- NEVER CHARGE UNATTENDED.
- NEVER CHARGE IN TEMPERATURES THAT EXCEED 29°C (85°F).
- NEVER CHARGE IN DIRECT SUNLIGHT/FLAMMABLE AREAS.

Cooling

The Purifyzer is ideal for those desiring a few hits per session. If you are having an extended session, Purifyzer may become slightly warm. Adhere to the following and Purifyzer will cool off in 0.5 to 1.5 mins:

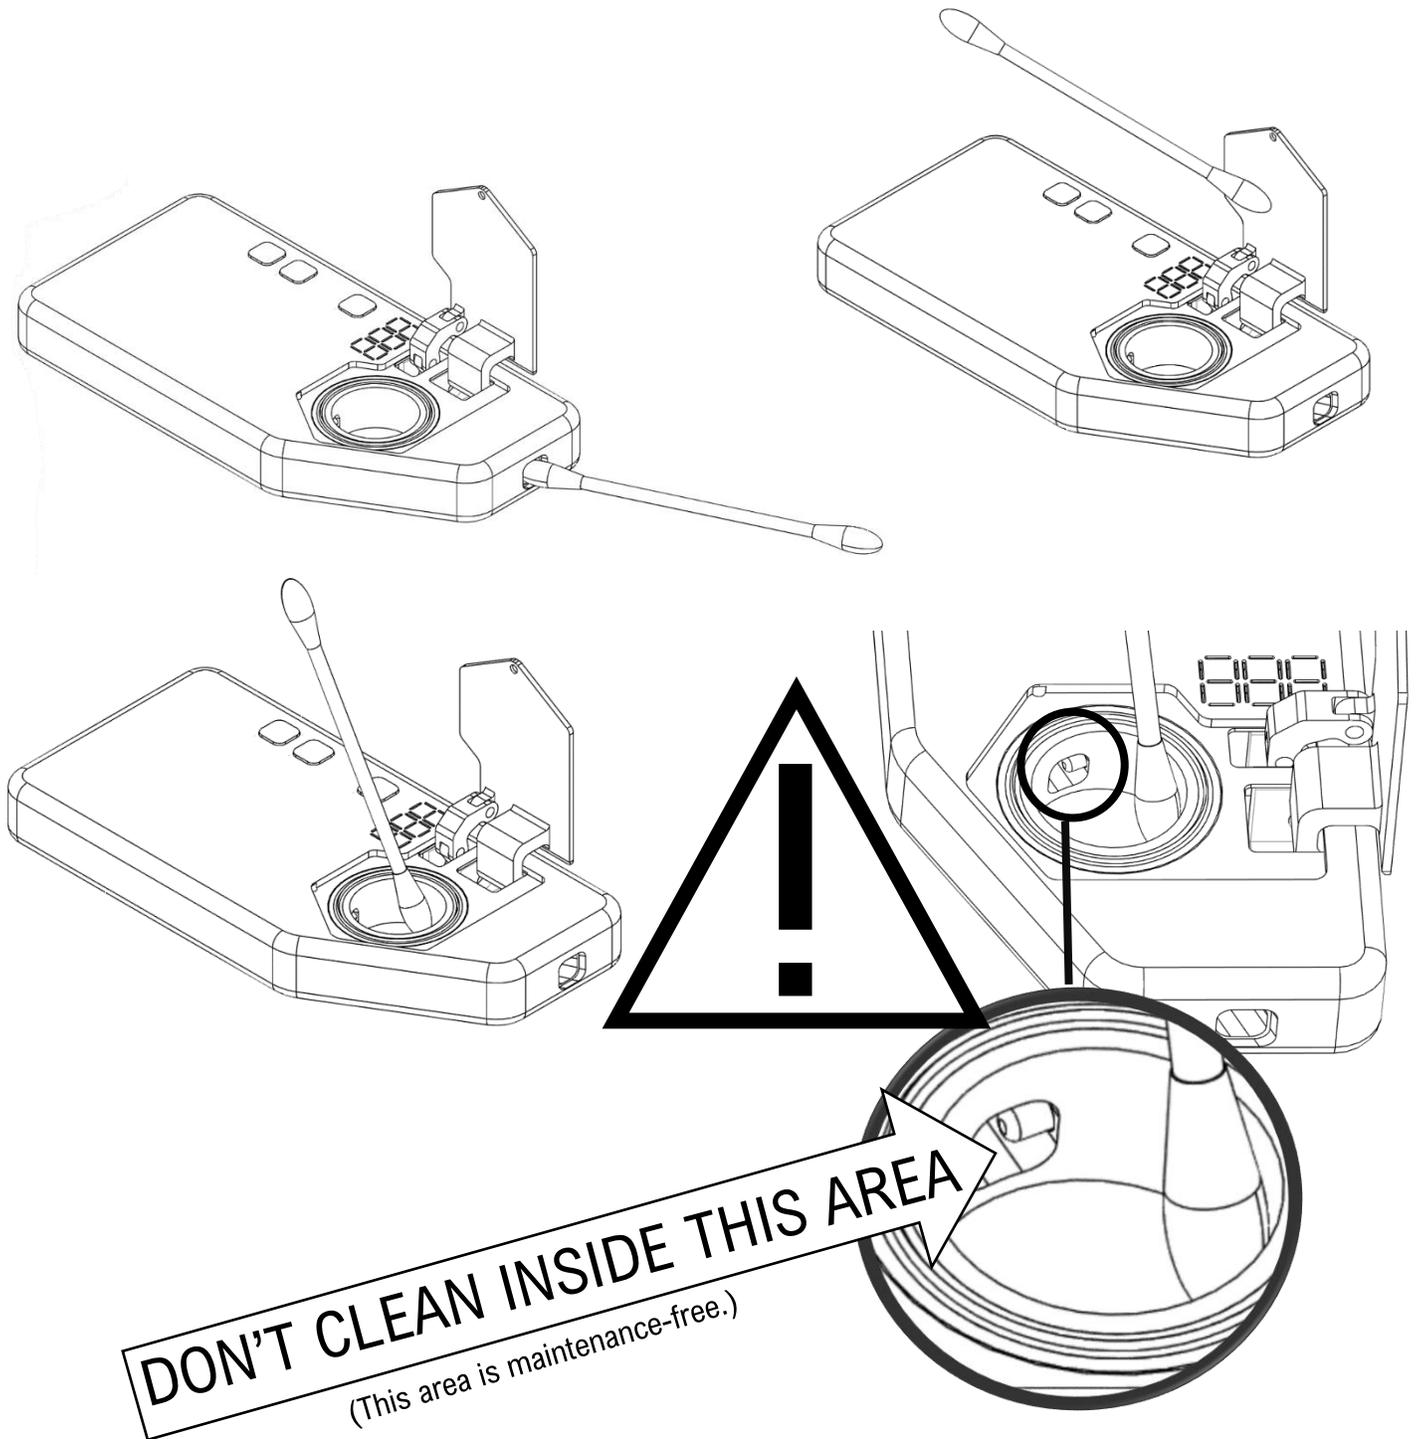

- Place on a cool/room-temp surface.
- Let go of device (your warm body temperature may slow the cool-off)
- Don't place near heat (including a pocket where the device is next to your warm body. This may slow heat dissipation)
- Keep away from sunlight.
- Use in a comfortable environment (airconditioned indoors/pleasant outdoor weather)

Bowl Cleaning

Purifyzer Cleaning

Take a cotton swab that's been lightly dabbed in isopropyl alcohol and clean throughout the airway, bowl and lid areas shown below. Conversely, do not clean in the certain areas noted below. Clean the device very regularly.

- Do not leave in environments where temperature can exceed 29°C (85°F) or go below 0°C (32°F). These environments can include and certainly not limited to cars, direct sunlight, areas near windows, on top of appliances that generate heat, outdoors. Etc.
- Do not use this device unless you are fully acquainted and agree with this user guide and the other terms and conditions.
- Keep away from anybody younger than the legal smoking age in your area.
- When in use, the device may become slightly warm after several consecutive hits. Luckily, the aluminum frame dissipates this heat very quickly. Let the device cool if it becomes too warm during use. This usually takes a few moments and can be even less in cool/windy environments. Irresponsible usage may result in device malfunction/shutoff due to overheating.
- Never charge irresponsibly. Keep the charging device away from flammable items/areas (alcohol, clothing, wood, and carpet among many others). Only charge in areas that are not prone to catch fire and ensure that no matter where you charge, that there are fire extinguishing measures in place. Negligent usage (ex. Charging near a kitchen oven receiving direct sunlight in a warm room) increases the risk of potential damage to the device.
